PROJECTS

[Concert Crew](#) | [Repository](#) | [Demo-Comp-Presentation](#) | Group Project

- Award-winning project at Turing School of Software & Design's Demo competition.
- Full-stack web application built with Ruby on Rails and React, with GraphQL querying.
- Concert Crew provides a user and their friends a source of truth for sharing details on upcoming shows, tested end-to-end with Cypress and continuously integrated with CircleCi.

[Angular Distance](#) | [Repository](#) | Solo Project

- A responsive web application built with React that offers a unique space flight reservation experience to users.
- Built using the Swiper Carousel library and styled with CSS, the application offers a visually appealing interface for users to navigate.
- With end-to-end testing using Cypress and deployment using Vercel, the application can be seamlessly integrated with future development to offer a smooth user experience.

[Rancid Tomatillos](#) | [Repository](#) | Group Project

- Rancid Tomatillos is a React application written in ES6 JavaScript, designed with accessibility in mind, a perfect 100% score on Lighthouse.
- The application is enhanced with RESTful API consumption featuring multiple endpoints and is rigorously tested using End to End Cypress testing and deployed with Vercel.
- Rancid Tomatillos provides a user-friendly interface for movie enthusiasts, allowing them to browse and view detailed descriptions and trailers for recently released films.

WORK HISTORY
