Photography
Cinematography

Languages

Javascript
React
TypeScript
GraphQL
SCSS
HTML/CSS
Cypress
Mocha/Chai

Projects

One Minute Writer [GitHub](#) [Live site](#)

Tech Used: React | TypeScript | Cypress | GraphQL | Ruby | Python

One minute writer is for creatives who are seeking inspiration and a space to document and organize their ideas and writing. They can track their progress through metrics on a user dashboard as well as revisit and edit past writings. In our writing page the user is gifted with some inspiration to help them start the writing process through a random word, image, and an audio.

Art From The Heart: [GitHub](#) [Live site](#)

Tech Used: React | TypeScript | Cypress | HTML5 | SCSS

Art from the heart is an application that implements a public api from the Art Institute of Chicago. Our application allows users to view art without bias so they can view art with an authentic opinion. Giving artists real feedback and art lovers the ability to be honest.

Rancid Tomatillos: [GitHub](#) [Live site](#)

Tech Used: React | React Router | Cypress | RESTful API | HTML5 | CSS

Rancid Tomatillos is a mock project of Rotten Tomatoes that allows the user to filter through a list of movies and search the movie by name. If you click a movie it will display that individual movie details along with a movie trailer. We used a public API to display our movie images and information from each movie.
